Summary

Adaptive Traffic Signal Automation Based on Vehicle Density Using AI and Embedded Systems Ashutosh Ghodke Department of Electronics & Computer Engineering Amrutvahini College of Engineering Sangamner, Maharashtra, India Email : asutoshghodke4@gmail.com Prof. M. T. Kanawade Department of Computer EngineeringAmrutvaahini college of Engineering (Maharashtra, India). The proposed model offers a cost-effective, scalable, and smart solution suitable for integration into modern intelligent transportation systems and smart city inf rastructure. The main contributions of this work are summarized as follows: 1. Experimental validation through prototype -based performance evaluation. The remainder of this paper is organized as follows : Section II presents the literature review, Section III presents the research paper, Section IV presents the paper, and Section V presents the proposed model.

Keywords

adaptive traffic signal automation, vehicle density, ai and embedded systems ashutosh ghodke department, electronics, computer, engineering, abstract - rapid urbanization and exponential growth, vehicle population
